TREATMENT INSTRUCTIONS

Powder coated steel

Our steel is protected with a hard surface of decorative powder coat, that ensures a product that lasts for many years. To ensure good corrosion resistance on our steel outdoor furniture, we use a zinc rich primer.

The primer makes the surface suitable for outdoor use.

Should the product get scratched or damaged, the metal will begin to rust. This will not spread, and does not degrade the product. A repair lacquer can be used, after any rust or loose paint is removed.
